Document Number: MCUXSDKMIMXRT6XXRN Rev. D, 01/2019

MCUXpresso SDK Release Notes Supporting EVK-MIMXRT685

1 Overview

The MCUXpresso Software Development Kit (SDK) is a collection of software enablement for Microcontrollers that includes peripheral drivers, high-level stacks including USB and lwIP, integration and mbed TLS cryptography libraries, other middleware packages, such FatFs, and integrated RTOS support for FreeRTOSTM OS. In addition to the base enablement, the MCUXpresso SDK is augmented with demo applications and driver example projects, and API documentation to help the customers quickly leverage the support of the MCUXpresso SDK.

For the latest version of this and other MCUXpresso SDK documents, see the MCUXpresso SDK homepage MCUXpresso-SDK: Software Development Kit.

NOTE

See the attached Change Logs section at the end of this document to reference the device-specific driver logs, middleware logs, and RTOS log.

2 MCUXpresso SDK

Development tools

As part of the MCUXpresso software and tools, MCUXpresso SDK is the evolution of Kinetis SDK v2.4.0, includes support for both LPC and i.MX System-on-Chips (SoC). The same drivers, APIs, and middleware are still available with support for Kinetis, LPC, and i.MX silicon. The MCUXpresso SDK adds support for the MCUXpresso IDE, an Eclipse-based toolchain that works with all MCUXpresso SDKs. Easily import your SDK into the new toolchain to have access to all of the available components, examples, and demos for your target silicon. In addition to the MCUXpresso IDE, support for the MCUXpresso Config Tools allows for easy cloning of existing SDK examples and demos, allowing users to easily leverage the existing software examples provided by the SDK for their own projects.

NOTE

In order to maintain compatibility with legacy Freescale code, the filenames and source code in MCUXpresso SDK containing the legacy Freescale prefix 'FSL' has been left as is. The 'FSL' prefix has been redefined as the NXP Foundation Software Library.

3 Development tools

The MCUXpresso SDK was compiled with these development tools:

- IAR Embedded Workbench for ARM version 8.32.1
- Makefiles support with GCC revision 7-2018-q2-update from ARM Embedded
- MCUXpresso IDE v10.3.1

4 Supported development systems

This release supports boards and devices listed in this table.

Table 1. Supported MCU devices and development boards

Development boards	MCU devices
EVK-MIMXRT685	PIMXRT685EVKA

5 Release contents

This table provides an overview of the MCUXpresso SDK release package contents and locations.

Table 2. Release contents

Deliverable	Location
Boards	<install_dir>/boards</install_dir>
Demo applications	<install_dir>/boards/<board_name>/demo_apps</board_name></install_dir>
CMSIS driver examples	<install_dir>/boards/<board_name>/cmsis_driver_examples</board_name></install_dir>
Driver examples	<install_dir>/boards/<board_name>/driver_examples</board_name></install_dir>
RTOS examples	<install_dir>/boards/<board_name>/rtos_examples</board_name></install_dir>
emWin examples	<install_dir>/boards/<board_name>/emwin_examples</board_name></install_dir>
USB demo applications	<install_dir>/boards/<board_name>/usb_examples</board_name></install_dir>

Table 2. Release contents (continued)

Documentation	<install_dir>/docs</install_dir>
Middleware	<install_dir>/middleware</install_dir>
USB Documentation	<install_dir>/docs/usb</install_dir>
IwIP Documentation	<install_dir>/docs/lwip</install_dir>
SDMMC card driver	<install_dir>/middleware/sdmmc</install_dir>
lwIP stack	<install_dir>/middleware/lwip</install_dir>
USB stack	<install_dir>/middleware/usb</install_dir>
Driver, SoC header files, extension header files and feature header files, utilities	<install_dir>/devices/<device_name></device_name></install_dir>
Cortex Microcontroller Software Interface Standard (CMSIS) ARM Cortex®-M header files, DSP library source	<install_dir>/CMSIS</install_dir>
Peripheral Drivers	<install_dir>/devices/<device_name>/drivers</device_name></install_dir>
Utilities such as debug console	<install_dir>/devices/<device_name>/utilities</device_name></install_dir>
RTOS Kernel Code	<install_dir>/rtos</install_dir>
Tools	<install_dir>/tools</install_dir>

6 MCUXpresso SDK release package

The MCUXpresso SDK release package contents are aligned with the silicon subfamily it supports. This includes the boards, CMSIS, devices, documentation, middleware, and RTOS support.

6.1 Device support

The device folder contains all available software enablement for the specific System-on-Chip (SoC) subfamily. This folder includes clock-specific implementation, device register header file, device register feature header file, CMSIS derived device SVD, and the system configuration source files. Included with the standard SoC support are folders containing peripheral drivers, toolchain support, and a simple debug console.

The device-specific header files provide a direct access to the MCU peripheral registers. The device header file provides an overall SoC memory mapped register definition. In addition to the overall device memory mapped header file, the MCUXpresso SDK also includes the feature header file for each peripheral instantiated on the SoC.

The toolchain folder contains the startup code and linker files for each supported toolchain. The startup code is a CMSIS-compliant startup that efficiently transfers the code execution to the main() function.

6.1.1 Board support

The boards folder provides the board-specific demo applications, driver examples, RTOS, and middleware examples.

6.1.2 Demo applications and other examples

The demo applications demonstrate the usage of the peripheral drivers to achieve a system level solution. Each demo application contains a readme file that describes the operation of the demo and required setup steps.

The driver examples demonstrate the capabilities of the peripheral drivers. Each example implements a common use case to help demonstrate the driver functionality.

The RTOS and middleware folders each contain examples demonstrating the use of the included source.

6.2 Middleware

6.2.1 USB stack

See the MCUXpresso SDK USB Stack User's Guide (document MCUXSDKUSBSUG) for more information.

6.2.1.1 Peripheral devices tested with the USB Host stack

This table provides a list of USB devices tested with the USB Host stack.

Table 3. Peripheral devices

Device type	Device
USB HUB	BELKIN F5U233
	BELKIN F5U304
	BELKIN F5U307
	BELKIN F4U040
	UNITEK Y-2151
	Z-TEK ZK032A
	HYUNDAI HY-HB608
USB flash drive	ADATA C008 32 GB
	ADATA S102 8 G
	ADATA S102 16 G
	Verbatim STORE N GO USB Device 8 G
	Kingston DataTraveler DT101 G2
	SanDisk Cruzer Blade 8 GB
	Unisplendour 1 G
	Imation 2 GB
	V-mux 2 GB
	Sanmina-SCI 128 M
	Corporate Express 1 G
	TOSHIBA THUHYBS-008G 8 G

Table 3. Peripheral devices (continued)

	Transcend JF700 8 G
	Netac U903 16 G
	SSK SFD205 8 GB
	Rex 4 GB
	SAMSUNG USB3.0 16GB
USB card reader/adapter	SSK TF adapter
	Kawau Multi Card Reader
	Kawau TF adapter
	Kawau SDHC card
USB Mouse	DELL MS111-P
	DELL M066U0A
	DELL MUAVDEL8
	TARGUS AMU76AP
	DELL MD56U0
	DELL MS111-T
	RAPOO M110
USB Keyboard	DELL SK8135
	DELL SK8115

6.2.2 File system

The FatFs file system is integrated with MCUXpresso SDK and can be used to access either the SD card or the USB memory stick when the SD card driver or the USB Mass Storage Device class implementation is used.

6.2.3 RTOS

The MCUXpresso SDK is integrated with FreeRTOS OS.

6.2.4 CMSIS

The MCUXpresso SDK is shipped with the standard CMSIS development pack, including the prebuilt libraries.

6.2.5 **SDMMC**

The SDMMC software is integrated with MCUXpresso SDK to support SD/MMC/SDIO standard specification. This also includes a host adapter layer for bare-metal/RTOS applications.

MCUXpresso SDK Release Notes Supporting EVK-MIMXRT685, Rev. D, 01/2019

6.2.6 Multicore

This software package contains components for efficient work with multicore devices as well as for multiprocessor communication. See the release notes in the *docs/multicore* and the change log in the *middleware/multicore* for more information.

6.2.7 mbedtls: Cryptographic and SSL/TLS Library

The MCUXpresso SDK is integrated with the mbed TLS Cryptographic and SSL/TLS Library.

7 MISRA compliance

All MCUXpresso SDK drivers and USB stack comply to MISRA C 2012 rules with the following exceptions.

Table 4. MISRA exceptions

Exception Rules	Description
Directive 4.4	Sections of code should not be commented out.
Directive 4.5	
Directive 4.5	Identifiers in the same name space with overlapping visibility should be typographically unambiguous.
Directive 4.6	Typedef that indicate size and signedness should be used in place of the basic numerical type.
Directive 4.8	If a pointer to a structure or union is never dereferenced within a transaction unit then the implementation of the object should hidden.
Directive 4.9	A function should be used in preference to a function like macro where they are interchangeable.
Directive 4.10	Precautions shall be taken in order to prevent the contents of a header file being included more than once.
Directive 4.11	The validity of values passed to library functions shall be checked.
Rule 2.3	A project should not contain unused type declarations.
Rule 2.4	A project should not contain unused tag declarations.
Rule 2.5	A project should not contain unused macro declarations.
Rule 2.7	There should be no unused parameters in functions.
Rule 3.1	The character sequences /* and // shall not be used within a comment.
Rule 5.1	External identifiers shall distinct.
Rule 5.3	A identifier declared in an inner scope shall not hide an identifier declared in an outer scope.
Rule 5.7	A tag name shall be a unique identifier.
Rule 5.9	Identifiers that define objects or functions with external linkage shall be unique.

Table 4. MISRA exceptions (continued)

Rule 8.3 All declarations of an object or function shall use the same names and type qualifiers. Rule 8.6 An identifier with external linage shall have exactly one external definition. Octal constants shall not be used. A object should be defined at block scope if its identified only appears in a single function. Rule 8.9 Appears in a single function. Operands shall not be of an inappropriate essential type. Rule 10.1 Operands shall not be of an inappropriate essential type. Rule 10.3 The value of an expression shall not be assigned to an object with a narrower essential type of a different essential type category. Rule 10.4 Both operands of an operator in which the usual arithmetic conversions are performed shall have the same essential type category. Rule 10.5 The value of an expression should not be cast to an inappropriate essential type. Rule 10.6 The value of an expression shall not be assigned to an object with wider essential type. Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed the the other operand shall not have wider essential type. Rule 10.8 The value of a composite expression shall not be cast to a different essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.1 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.5 A conversion should not be performed between a pointer to object and an integer type. Rule 11.6 A cast shall not be performed between a pointer to object and an integer type. Rule 11.6 A conversion should not be performed between a pointer to object and an integer type. Rule 11.6 A cast shall not be performed between a pointer to object and an integer type. Rule 12.1 The right hand operator of a shift operator shall lie in the range zero to one less than the width		
Rule 8.6 An identifier with external linage shall have exactly one external definition. Rule 8.7 Octal constants shall not be used. A object should be defined at block scope if its identified only appears in a single function. Rule 10.1 Operands shall not be of an inappropriate essential type. Rule 10.3 The value of an expression shall not be assigned to an object with a narrower essential type of a different essential type category. Rule 10.4 Both operands of an operator in which the usual arithmetic conversions are performed shall have the same essential type category. Rule 10.5 The value of an expression should not be east to an inappropriate essential type category. Rule 10.6 The value of an expression shall not be cast to an inappropriate essential type. Rule 10.7 If a composite expression is used as one operand of an object with wider essential type. Rule 10.7 If a composite expression is used as one operand of an operator which the usual arithmetic conversions are performed then the other operand shall not be cast to a different essential type. Rule 10.8 The value of a composite expression shall not be east to a different essential type category or a wider essential type. Rule 11.1 Conversions shall not be performed between a pointer to a different essential type category or a wider essential type. Rule 11.3 A case shall not be performed between a pointer to a function and any other type. Rule 11.4 A conversion should not be performed between a pointer to object type and a pointer to a different object type. Rule 11.5 A conversion should not be performed between a pointer to object and an integer type. Rule 12.1 The pracedence of operators within expressions should be made explicit. The pracedence of operators within expressions should be made explicit. The right hand operator of a shift operator shall lie in the range zero to one less than the within bits of the essential type of the lief than doperator. Rule 13.5 A full expression containing an increment(++) or decrement operator.	Rule 8.13	
Rule 8.7 Octal constants shall not be used. A object should be defined at block scope if its identified only appears in a single function. Rule 10.1 Operands shall not be of an inappropriate essential type. Rule 10.3 The value of an expression shall not be assigned to an object with a narrower essential type category. Rule 10.4 Both operands of an operator in which the usual arithmetic conversions are performed shall have the same essential type category. Rule 10.5 The value of an expression should not be cast to an inappropriate essential type category. Rule 10.6 The value of an expression should not be cast to an inappropriate essential type. Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed thin wider essential type. Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed then the other operand shall not be cast to a different essential type. Rule 10.8 The value of a composite expression shall not be cast to a different essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.5 A conversion should not be performed between a pointer to object and an integer type. Rule 11.6 A cast shall not be performed between pointer to void into pointer to object. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. A full expression containing an increment(++) or decrement(-) operators. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 8.3	
Rule 8.9 A object should be defined at block scope if its identified only appears in a single function. Pule 10.1 Operands shall not be of an inappropriate essential type. The value of an expression shall not be assigned to an object with a narrower essential type of a different essential type category. Rule 10.4 Both operands of an operator in which the usual arithmetic conversions are performed shall have the same essential type category. Rule 10.5 The value of an expression should not be cast to an inappropriate essential type. Rule 10.6 The value of a composite expression shall not be assigned to an object with wider essential type. Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed then the other operand shall not have wider essential type. Rule 10.8 The value of a composite expression shall not be assigned to an operator in which the usual arithmetic conversions are performed then the other operand shall not have wider essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.4 A case shall not be performed between a pointer to object type and a pointer to a different object type. A case shall not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed between a pointer to object and an integer type. Rule 11.6 A cast shall not be performed between pointer to void into pointer to object. Rule 12.1 The precedence of operators within expressions should be made explicit. The right hand operand of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. A full expression containing an increment (++) or decrement (-+) or decrement operator. Rule 13.5	Rule 8.6	
Rule 10.1 Rule 10.3 Rule 10.3 Rule 10.3 Rule 10.4 Rule 10.4 Rule 10.4 Rule 10.5 Rule 10.5 Rule 10.5 Rule 10.5 Rule 10.6 Rule 10.6 Rule 10.7 Rule 10.6 Rule 10.7 Rule 10.7 Rule 10.8 Rule 10.7 Rule 10.7 Rule 10.7 Rule 10.7 Rule 10.8 Rule 10.8 Rule 10.8 Rule 10.9 Rule 10.9 Rule 10.9 Rule 10.9 Rule 10.7 Rule 10.7 Rule 10.7 Rule 10.8 Rule 10.9 Rule 10.8 Rule 10.8 Rule 10.8 Rule 10.9 Rule 10.8 Rule 10.8 Rule 10.9 Rule 10.8	Rule 8.7	Octal constants shall not be used.
Rule 10.3 The value of an expression shall not be assigned to an object with a narrower essential type of a different essential type category. Rule 10.4 Both operands of an operator in which the usual arithmetic conversions are performed shall have the same essential type category. Rule 10.5 The value of an expression should not be cast to an inappropriate essential type. Rule 10.6 The value of a composite expression shall not be assigned to an object with wider essential type. Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed then the other operand shall not have wider essential type. Rule 10.8 The value of a composite expression shall not be cast to a different essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed from pointer to void into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void into pointer to object. Rule 12.1 The precedence of operators within expressions should be made explicit. The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement(-+) operator should have no other potential side effects other than that caused by the increment or decrement operator. The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 8.9	
with a narrower essential type of a different essential type category. Rule 10.4 Both operands of an operator in which the usual arithmetic conversions are performed shall have the same essential type category. Rule 10.5 The value of an expression should not be cast to an inappropriate essential type. Rule 10.6 The value of a composite expression shall not be assigned to an object with wider essential type. Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed then the other operand shall not be cast to a different essential type. Rule 10.8 The value of a composite expression shall not be cast to a different essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed from pointer to void into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void and an arithmetic type. Rule 12.1 The precedence of operators within expressions should be made explicit. The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement(-) operator should have no other potential side effects other than that caused by the increment or decrement operator. The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 10.1	Operands shall not be of an inappropriate essential type.
conversions are performed shall have the same essential type category. The value of an expression should not be cast to an inappropriate essential type. Rule 10.6 The value of a composite expression shall not be assigned to an object with wider essential type. Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed then the other operand shall not have wider essential type. Rule 10.8 The value of a composite expression shall not be cast to a different essential type category or a wider essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed between a pointer to object and an integer type. Rule 11.6 A cast shall not be performed between pointer to void into pointer to object. Rule 12.1 The precedence of operators within expressions should be made explicit. The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 10.3	with a narrower essential type of a different essential type
Inappropriate essential type. The value of a composite expression shall not be assigned to an object with wider essential type. Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed then the other operand shall not have wider essential type. Rule 10.8 The value of a composite expression shall not be cast to a different essential type category or a wider essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed from pointer to void into pointer to object. A conversion should not be performed between a pointer to void into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void and an arithmetic type. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 10.4	conversions are performed shall have the same essential type
Rule 10.7 If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed then the other operand shall not have wider essential type. Rule 10.8 The value of a composite expression shall not be cast to a different essential type category or a wider essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed from pointer to void into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void and an arithmetic type. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The precedence of operators within expressions should be made explicit. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 10.5	
operator in which the usual arithmetic conversions are performed then the other operand shall not have wider essential type. Rule 10.8 The value of a composite expression shall not be cast to a different essential type category or a wider essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed from pointer to void into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void into pointer to object. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operators should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 10.6	
different essential type category or a wider essential type. Rule 11.1 Conversions shall not be performed between a pointer to a function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed from pointer to void into pointer to object. Rule 11.6 A cast shall not be performed from pointer to void into pointer to object. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 10.7	operator in which the usual arithmetic conversions are performed then the other operand shall not have wider
function and any other type. Rule 11.3 A case shall not be performed between a pointer to object type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed from pointer to void into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void and an arithmetic type. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 10.8	
type and a pointer to a different object type. Rule 11.4 A conversion should not be performed between a pointer to object and an integer type. Rule 11.5 A conversion should not be performed from pointer to void into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void and an arithmetic type. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 11.1	
Description object and an integer type. A conversion should not be performed from pointer to void into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void and an arithmetic type. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 11.3	
into pointer to object. Rule 11.6 A cast shall not be performed between pointer to void and an arithmetic type. Rule 12.1 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 11.4	
Rule 12.1 Rule 12.2 The precedence of operators within expressions should be made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 11.5	
made explicit. Rule 12.2 The right hand operator of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 11.6	· · · · · · · · · · · · · · · · · · ·
range zero to one less than the width in bits of the essential type of the left hand operand. Rule 13.3 A full expression containing an increment(++) or decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 12.1	
decrement() operator should have no other potential side effects other than that caused by the increment or decrement operator. Rule 13.5 The right hand operand of a logical && or II operator shall not contain persistent side effects.	Rule 12.2	range zero to one less than the width in bits of the essential
contain persistent side effects.	Rule 13.3	decrement() operator should have no other potential side effects other than that caused by the increment or decrement
Rule 14.2 A for loop shall be well formed.	Rule 13.5	
	Rule 14.2	A for loop shall be well formed.

Known issues

Table 4. MISRA exceptions (continued)

Rule 14.4	The controlling expressions of an statement and the controlling expression of an iteration-statement shall have essentially Boolean type.
Rule 15.5	A function should have a single point of exit at the end.
Rule 16.1	All switch statements shall be well-formed.
Rule 17.1	The feature of <stdarg.h> shall not be used.</stdarg.h>
Rule 18.4	The +,-,+=and -=operators should not be applied to an expression of pointer type.
Rule 19.2	The union keyword should not be used.
Rule 20.1	#include directives should only be preceded by preprocessor directives or comments.
Rule 20.10	The #and ## preprocessor operators should not be used.
Rule 21.1	#define and #undef shall not be used on a reserved identifier or reserved macro name.

8 Known issues

8.1 Maximum file path length in Windows® 7 Operating System

Windows 7 operating system imposes a 260 character maximum length for file paths. When installing the MCUXpresso SDK, place it in a directory close to the root to prevent file paths from exceeding the maximum character length specified by the Windows operating system. The recommended location is the C:\nxp folder.

8.2 WWDT reset issue on the EVK Rev B board

The flash on the EVK board is MX25UM51345G, which has two command sets: SPI and OPI. On the power-on-reset, the SPI mode is active, and ROM can use the SPI command set to configure the flash, switch to the OPI mode to achieve the best performance, then boot to the application. However, the WWDT reset cannot reset on-board flash, and after watchdog reset, ROM will fail to initialize the flash as it still starts with the SPI command while the flash is in OPI mode.

To fix this issue, the EVK board needs to have a GPIO pin connected to the flash RESET signal to allow the software reset of the on-board flash.

8.3 QSPI flash download issue

If rhe QSPI flash already has a bootable application and the board boot mode is set to QSPI flash boot, an uncertain download error will report by the flash loader when downloading the flash target application. If you want to run a flash target application using an IAR or GDB server, set the boot mode to USB ISP mode (ISP[2:0]=3'b010).

8.4 IAR Freertos port issue

Currently, a FreeRTOS IAR port with MPU support for cm33 does not exist. Therefore, the the freertos_mpu example is not included in the IAR project. Instead, use ARMGCC to build and run this example.
